Site Name: Belgrade Municipal Well Field. 1115

Location:

Not Responsive

MPCA Notified: December 22, 1986: On December 22, 1986, a letter was sent to Mike Kanner, Site Response Section Chief, by Gary Englund, Minnesota Department of Health, Section Chief of Water Supply and Engineering, notifying him of the contamination problem.

Description: In February and March of 1984 the Minnesota Department of Health (MDH) sampled the City of Belgrade's Municipal Wells and found trace amounts of toluene and benzene in Municipal well #2. In October, 1985 the wells were sampled again and no Volatile Organic Compounds were detected. However, in November and December of 1986 the MDH sampled the City wells again and detected tetrachloroethylene in Municipal well #2 at concentrations of 160 ug/l and 260 ug/l, respectively. At present, the MDH has recommended that use of Well No. 2 be discontinued and that monitoring of the other municipal well continue.
